

### New! ALU Profile LEDEC

Fabric LED Light Boxes are the latest visual display trend for big, bold graphics that capture a viewer's attention.

**There is a big reason that Stretch Fabric is becoming so popular with retailers, IT'S EASY.**

**Frame made of a lightweight sturdy aluminum assembled using a basic connector system.**

**The result is an edgeless, frameless look that is right for any upscale retail environment.**

**You can customize our Stretch fabric LED Light Box to meet your particular design requirements. Finish, graphic or frame size, LED color temperature and intensity and power connection can all be customized.**

### LIGHT BOX DESIGN

Designed for indoor use, our Stretch Fabric LED Light Box is well suited for large format backlit displays for maximum visual impact in retail stores, corporate offices, health and medical facilities, exhibits and trade shows, as well as art galleries and museums.

We offer LED lighting in multiple color temperatures from warm to bright daylight equivalencies in both standard and high output options. **Our Fabric Light Box uses edge lit or back lit LED lighting that draws light throughout the display for bright, even backlit illumination without hot spots or shadowing.**

**Stretch Fabric LED Light Boxes can be wall mounted, free standing with an option floor stand or suspended.**

**Each panel incorporates an ultrasonically welded 'Harpoon Edge' which clips into the profile.**

**Large format printing: We have a team of printing professionals who use the most advanced techniques to print in large format.**

**Creativity: The digital image you choose can be enhanced. All effects are possible.**

Stretch Ceiling Systems add to your creative resources and lets you invite imagination into each and every design.
